

Red Hat Enterprise Linux Certification Matrix for Dell EMC PowerEdge Servers

June 19, 2018

Dell EMC Linux Team

Introduction

- This set of matrices attempt to represent the certification status between different versions of Red Hat Enterprise Linux and Dell EMC PowerEdge servers
- Dell EMC's policy is to offer 'validation' support for a new release of RHEL at the moment it is GA from Red Hat
 - Customers with an existing Dell EMC ProSupport contract who purchased their RHN subscription with their Dell EMC server may download and install the new release onto their server and will continue to be covered by their ProSupport contract.
 - Please note that only the contents of the distribution ISO are supported. No other software.
- Please note the Red Hat CPU support policy here :
 - <https://access.redhat.com/support/policy/intel>

Support levels for a platform/release combination

- There are three levels of status :
 - **Not Supported** : The absence of an icon indicates that this release is not supported or certified for the referenced platform.
 - **Validated** : The release has been successfully certified and tested and will appear on the Red Hat hardware certification page. The contents of the distribution ISO are supported by Dell EMC for their RHEL OEM customers and the ISO contains functioning drivers for the hardware platform. In the following matrices, Validated is indicated by : 
 - **Fully Supported** : The contents of the distribution ISO are **Validated** AND the Dell EMC Systems Management tools are available for this combination of RHEL release and the hardware. In the following matrices, Fully Supported is indicated by : 

Red Hat ES 7 downgrade and extensions

- The owner of a valid RHN subscription may download other versions of RHEL at no charge. If the combination of the platform and the OS release are marked as at least Validated, this is supported.
- Customers with a current Dell EMC ProSupport contract who purchased their RHEL subscription from Dell with their server are able to download and use those RHEL extensions (such as RH Atomic or Real Time) and continue to be covered by their support contract.
- Other Red Hat products such as RHEV are not included but the certification for RHEL also certifies that product which can be purchased directly from Red Hat.

RHEL 7.x
